Quick Start Guide

replify

Download

1 Download the Replify trial from www.replify.com.

2 An email from Replify will give you links to download the Virtual Appliance & Enterprise Manager.

3 Virtualisation platforms supported include VMWare ESX, Microsoft HyperV, QEMU/KVM and Docker.

Installation

vmware®

1 If deploying on VMware open your vSphere Client and enter the appropriate server name and login details for your ESX.

2 Deploy OVF Template and then download the latest VA from the Replify website. http://www.replify.com/ESX-VA

3 Once the VA is deployed go to http://your-va-ip/ to access the dossier. Send the dossier information to support@replify.com to obtain your license key.

Configuration

1 The first step in configuring the VA is to add your Application Servers.

2 Next step is to install your Client – this could include Windows, Android, macOS or Linux.

3 Now connect to your VA and begin OPTIMIZATION!
