FLEXIBLE NETWORK ACCELERATION

Replify Accelerator Rolled Out to Sirius Facilities Workforce

Background

Sirius Facilities GmbH are a leading provider of branded business parks in Germany. They provide flexible commercial real estate nationwide.

With over 50 business parks and counting, facilitating the daily business operations of over 40,000 tenants, they have developed a wide a varied client portfolio.

The Challenge

Sirius Facilities contacted Replify for a WAN Optimization solution that would improve their user's productivity and user experience when working from home.

With over 95% of Sirius's 250-strong workforce working from home, more strain than ever was being put on the network links at the companies headquarters.

Sirius was looking for a software-based solution that could be installed on employee's devices. A hardware-based solution was not an option given the users were working remotely.

Sirius's users need access to hundreds of gigabytes of data to perform their daily tasks. Most of this data only requires small daily updates. However, their employee's were getting frustrated with the wait times to open and save documents remotely.

Sirius had used other WAN optimization solutions in the past and so were aware of the great benefits technology such as Replify's could bring to this challenging environment.

The Solution

Replify's Mobile Client solution was perfect for Sirius's use-case. Developed as part of the core Replify Solution since 2007, the software-based Mobile Client brings all the optimization available in a Replify Virtual Appliance straight to the end-user device.

A Replify Virtual Accelerator was deployed on a VMWare hypervisor at the company headquarters. Via a simple automated deployment task, the Replify Accelerator Client was installed on each of the employee's Windows PCs.

The Results

The benefits that Replify brought were apparently almost immediately. Over 60% offload in WAN traffic sped up applications and reduced the frustration a previously experienced by the remote workers.

"I reached out on a Saturday morning to 2 WAN Optimization companies one of which was Replify by Sunday working with Replify's fantastic support team we had a working solution for our users. I heard back from the other well-known WAN optimisation provider 2 months later..."

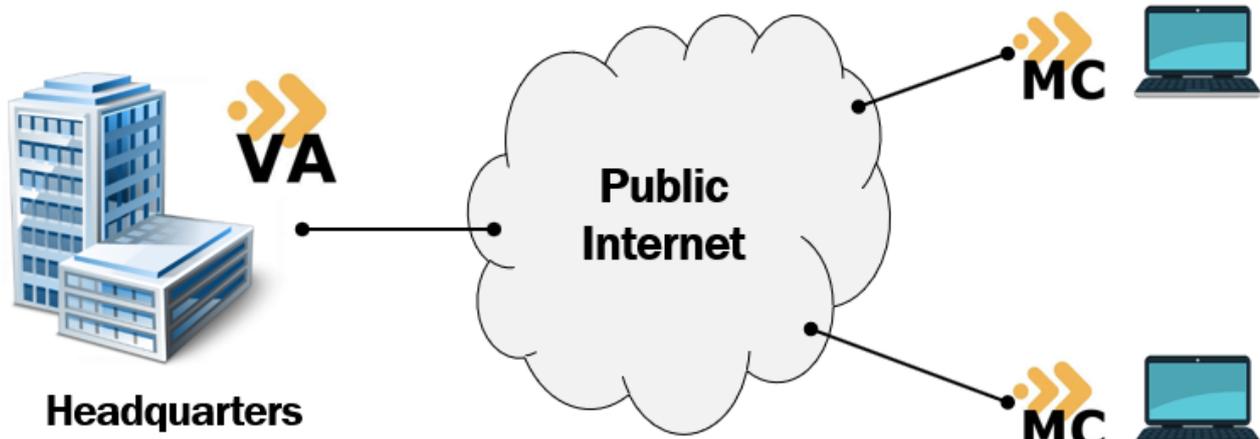

The results have been brilliant! Easy to setup and maintain. Achieving a 3 times performance increase and a 60% offload from the WAN plus very happy users that's a win in my book.

I would recommend Replify to anyone a trial is very easy to setup and the results can be seen instantly.

Stuart Gale (Sirius Facilities IT Leader)

As well as speeding up the applications that Replify accelerated, more bandwidth was also available for other types of traffic on the link, bringing a better experience for all users of the network.

Replify Accelerator Rolled Out to Sirius Facilities Workforce

Replify's VA was installed in the Sirius Facilities HQ. The Mobile Client was installed on each of the employee's laptops. Regardless of ISP, connection quality or type of link being used, the mobile client worked with the VA over the public internet to deliver world-class optimization.

"Replify had the pleasure of working with Sirius Facilities to bring our world-class optimization suite to their environment.

Thanks to Replify's easy-to-deploy solution, the turnaround time from download request and trial to a production system was only 5 days.

The benefits seen by Sirius and our other customers prove Replify's capability to deliver even in those environments where our competitors struggle."

Rozy Corry (CEO of Replify Ltd)

Empowering Home Workers

With many organisations having to embrace home working as a new normal, extending office-like user experiences to those home users is a priority. For over a decade, Replify has been accelerating applications right to the end-user device thanks to its Replify Accelerator Mobile Client software.

From removing user frustration and freeing up network bandwidth, to quantifiably reducing data costs over metered networks, Replify's experience and expertise could help transform your organisations experience of supporting remote workers.

Software Heritage

Where installing a hardware infrastructure is costly, difficult to maintain, or simply impractical, the Replify solution could be exactly what you need to get the most out of your WAN.

With performance and licensing that scales seamlessly with your hardware, you can continue to enjoy the benefits of

Replify's Accelerator long into the future, even when you make hardware changes.

About Replify Ltd

Replify Ltd is a world-leading supplier of WAN optimization software for off-the-shelf deployments and bespoke SD-WAN integrations.

Based in Belfast, UK, Replify was founded in 2007 and was one of the first WAN optimization companies to market with a software only virtual appliance solution in 2009, including a multi-platform mobile client.

Replify's software is available for a wide range of hypervisors and can also be installed on bare-metal Linux-based devices (including routers). Replify also provides acceleration clients for a wide range of mobile devices including Android, Windows, MacOS and Linux. Replify's core business is providing its WAN Optimization technology to other vendors under OEM license and integrating it deeply into SD-WAN platforms, often white labelled.
